

Some information about students enrolling into RunningSubjects needs to be collected and stored in a database.

Information, such as student-name, address, phone, and email, are used to describe students. The student-code identifies the student. A student can have one or no phone number. A student could also be an undergraduate who participates in one or no projects at all, or a postgraduate where a supervisor's name and a thesis could be used to describe him/her. The student could be participating in one or no theses at all.

During a year session, a subject may or may not run; if it runs it becomes a RunningSubject. Many students enroll into many RunningSubjects on the enrolment date. A RunningSubject is described by a web-link. On the other hand, a subject is described by the subject-title, total-credits, and assignments. The subject-code identifies the subject. Assignments can be zero or more.
